Harsh Eary

Software Engineer | Applied AI | Full-Stack Development

437-669-4162 | harsheary2005@gmail.com | harsheary.com | linkedin.com/in/harsh-eary | github.com/Harsheary

Experience

Application Programmer May 2026 – August 2026

Government of Ontario – MPBSDP *Toronto, ON*

- Led four interns testing RAG and document-generation agents; coordinated execution and reporting, including 15 RAG cases covering grounding, citation accuracy, and conversation memory.
- Co-developed a metadata-management proof of concept using synthetic data assets, FastAPI, PostgreSQL, and interactive dashboards for catalog discovery and data lineage.

Software Developer Intern September 2025 – December 2025

Tetra Tech *Pickering, ON*

- Owned end-to-end development of NICR, an engineering document application built with ASP.NET Core 8, React, TypeScript, SQL Server, and Entity Framework Core.
- Integrated Azure Document Intelligence OCR and Azure OpenAI to extract equipment attributes from PDFs and draft justifications comparing existing and proposed specifications, with editable user review.
- Built equipment-search and file-upload APIs with input validation, Windows authentication, structured logging, and error handling; generated templated Word reports using Open XML.
- Created 39 xUnit tests with Moq and FluentAssertions and configured Azure Pipelines to build the application, execute tests, and collect code coverage.

Website Developer Intern January 2025 – April 2025

Physiomed *Oakville, ON*

- Developed internal web tools for rehabilitation data tracking and consistent data capture across clinical workflows.
- Tested authentication, database operations, and backend services; resolved defects affecting reliability and user experience.

Skills

Languages: C#, TypeScript, Python, SQL, JavaScript, Java
Frameworks: ASP.NET Core, React, Next.js, FastAPI, Node.js, Entity Framework Core
AI & Data: Azure OpenAI, Azure Document Intelligence, RAG Evaluation, Scikit-learn, pandas
Databases: SQL Server, PostgreSQL, MongoDB
Tools & Testing: Git, Docker, Azure DevOps, Linux, Postman, xUnit, Moq, FluentAssertions

Projects

Mystery Message | *Next.js, TypeScript, NextAuth, MongoDB*

- Developed a full-stack messaging application using Next.js, TypeScript, NextAuth, and MongoDB for authenticated workflows and persistent message storage.
- Validated API endpoints, authentication, and error handling; resolved defects affecting user workflows and application reliability.

Traffic Fatality Prediction | *Python, Scikit-learn, REST API*

- Built a machine-learning pipeline for traffic-fatality data, covering preprocessing, feature engineering, model training, and output validation.
- Deployed the trained model through a REST API for real-time predictions and verified request and response accuracy.

Education

Advanced Diploma in Software Engineering – AI Expected December 2026

Centennial College, Scarborough, ON *GPA: 4.3/4.5*
